SUMMARY

Senior backend engineer with over eight years of experience building distributed systems and customer-facing products, including more than four years at Intuit Mailchimp supporting infrastructure at massive scale. Experienced in PHP/Laravel, Go, Java, and AWS, with a strong focus on reliability, maintainability, and pragmatic product engineering. Founder of haircontinuity.com, a live SaaS platform built and operated independently.

EXPERIENCE

FOUNDER, FISHDARN LLC — AUGUST 2025–PRESENT

haircontinuity.com

- Independently designed, built, and launched haircontinuity.com, a SaaS platform for hairstylists to document client history and maintain service consistency — live and accepting customers
- Built on the TALL stack (Tailwind, Alpine, Livewire, Laravel) with Stripe billing via Laravel Cashier, Cloudflare R2 image storage, and AI-powered visit summaries via Google Gemini Flash Lite; deployed on Laravel Cloud

SENIOR SOFTWARE ENGINEER, INTUIT MAILCHIMP — SEPTEMBER 2021–JULY 2026

Link Shortening Service Rebuild

- Rebuilt the link-shortening service in Java Spring Boot
- Migrated the data store from MySQL to DynamoDB Global Tables, creating a multi-region active-active topology
- Reduced p50 latency from 50ms to 3ms

User Data Migration to AWS RDS

- Led two of 21 shard migration groups (4 engineers each) in the live, zero-downtime migration of 14 million Mailchimp user accounts to Amazon RDS using a custom Go service built on Shopify's Ghostferry framework
- Led the latin1-encoded shard migration, where character-set mismatches required custom normalization scripts to safely preserve data integrity

HTTP Interposer

- Contributed to building a Go-based HTTP proxy routing traffic across Mailchimp's colocated, GCP, and AWS environments during a major cloud migration
- As infrastructure consolidated to AWS, the service evolved into a single pane of observability and load balancer across Kubernetes clusters — remains in production today

FULL STACK DEVELOPER, POINTS OF LIGHT — NOVEMBER 2017–SEPTEMBER 2021

PVSA

- Led development of a greenfield rewrite of [presidentialserviceawards.gov](https://www.presidentialserviceawards.gov), a Laravel application for managing Presidential volunteer service awards, as part of a 3-person engineering team
- Migrated legacy data from Salesforce into PostgreSQL

JUNIOR DEVELOPER, MORRISON AGENCY — JUNE 2017–NOVEMBER 2017

SKILLS

Languages: PHP, Go, Java, SQL

Frameworks & Tools: Laravel, Livewire, Alpine.js, Tailwind CSS, Spring Boot

Infrastructure & Data: AWS (DynamoDB, RDS), GCP, Kubernetes, MySQL, PostgreSQL, Cloudflare R2

Monitoring: Splunk, Grafana, Wavefront

EDUCATION

GENERAL ASSEMBLY (ATLANTA), CERTIFICATE — FEBRUARY 2017–JUNE 2017

Focused on the MEAN stack, with additional exposure to Ruby on Rails and NoSQL databases.

FULL SAIL UNIVERSITY, BS FILM PRODUCTION — JUNE 2009–MARCH 2011

Earned a Bachelor of Science in Film Production.
